

Juicetification: The Lean Rush

Student quick guide · about 30–45 min, best in one sitting · a required debrief is reviewed

1 · How one round works — the PDCA loop

- 1 CHECK**
Read the top panel: Lean Score, profit, which wastes are red.
- 2 ACT**
The coach asks one question. Answer it — this unlocks RUN.
- 3 PLAN**
The coach opens the ONE decision worth the most. Change it.
- 4 DO**
Press the flashing RUN button in the sidebar.

2 · You finish when all four are ticked

✓ Wastes worth fixing countered where it pays	✓ Lean Score ≥ 70 quality, speed, flow	✓ Profit $> \\$0$ the shop makes money	✓ Spending pays off drop what doesn't pay
---	--	--	---

There is no fixed number of rounds — take as many as you need.

3 · The 7 wastes and how you fix each one

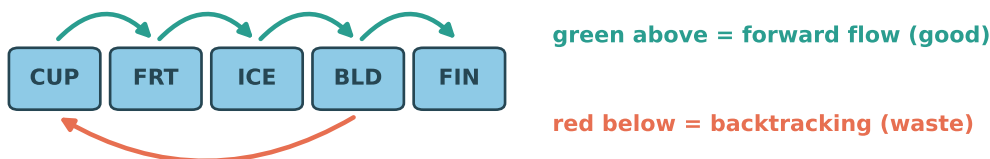

Overproduction	Making drinks before they're ordered	5S #1 Sort — batch 1, no pre-made	free
Transport	Drinks carried back and forth	5S #2 Set in order — line up the stations	\$1
Motion	Staff hunting for tools	5S #3 Shine — clean & label	\$3–6
Overprocessing	Every drink made a different way	5S #4 Standardize — recipe cards	\$2–8
Inventory	Stock sitting around going stale	5S #5 Sustain — one-piece / FIFO / pull	free–\$3
Defects	Wrong drinks that must be remade	Visual signals — a ticket rail	\$2–10
Waiting	Customers walking out	Capacity — only at the bottleneck	varies

4 · What to do first — cheap beats expensive

The cheapest organising changes return the most per dollar.
Capacity costs money every rush — add it only at the real bottleneck.

5 · Reading the flow diagram

Drag the stations into the order a drink is actually made, until every arrow is green.

Finishing up — how to hand in

When all four objectives are ticked, a debrief opens. The four reflections and the 5-question check are required and reviewed by your instructor. Download the report any time: page 1 says COMPLETE or INCOMPLETE.
